

We build Agentic AI solutions that run your operations; not just answer questions.

Lenaar Digital LLC (headquartered in Florida, USA) designs, ships, and governs production AI systems: agentic automation, private LLM & RAG deployments, and the monitoring layer that keeps them accountable 24/7, not just in the demo.

Our core mindset to develop anything is to cut the time to market, or cost to run the operations with superior quality delivery experience.

Validate your POC in 3 days,
Idea to live system in 30 days..!

1

Discover

We learn your workflow, your data, and what could go wrong. No code until we agree on the plan.

2

Build

You get a working version in less than a week, built on your real data. Not a slide deck. Not a mockup.

3

Deploy

We connect to your systems, run security checks, and plan a safe rollout before anything goes live.

We validate every approach before we build it.

We don't bill you just because it's a "cool idea" if it doesn't make business sense.

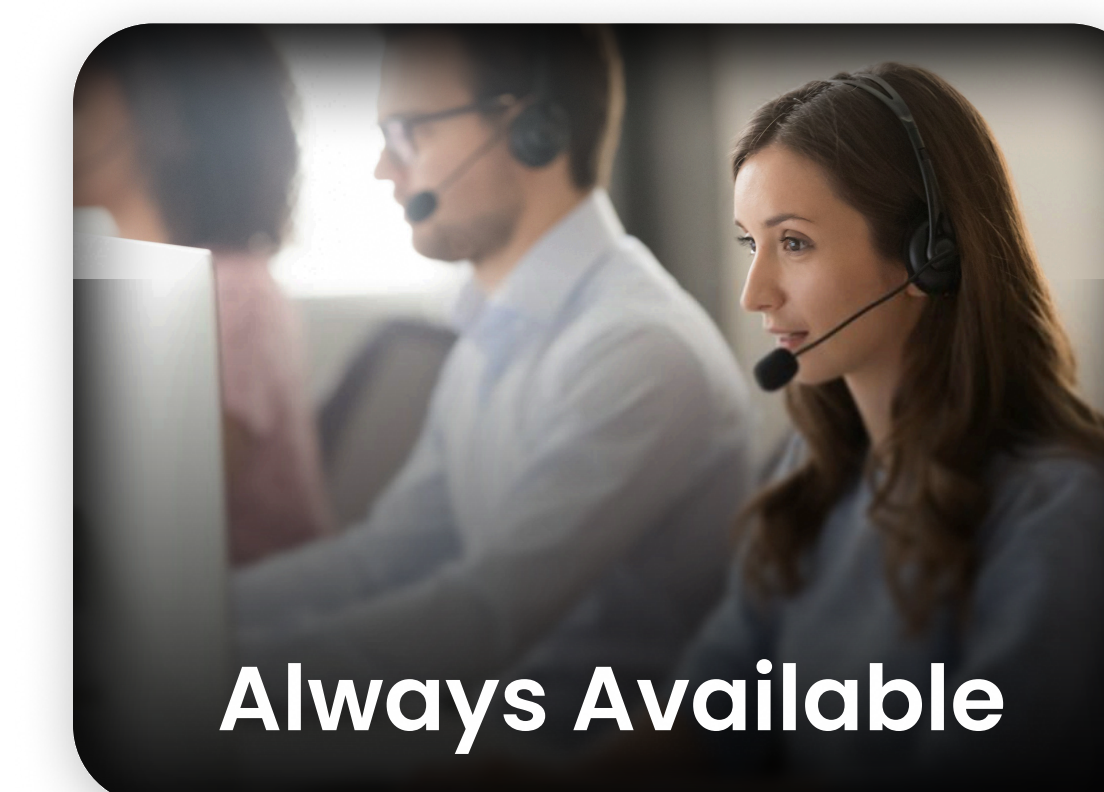

Support

After launch, we monitor, test, and fix issues. Your team gets full docs and training to take over.

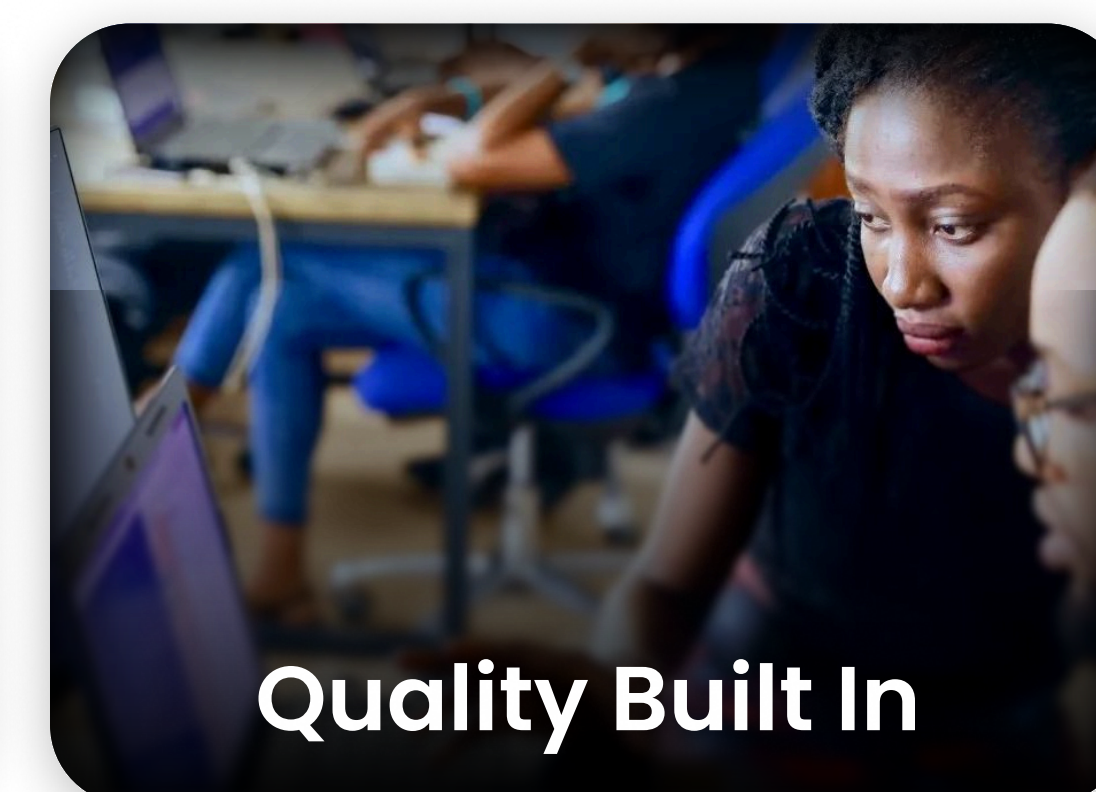

4

Why Clients Choose Us?

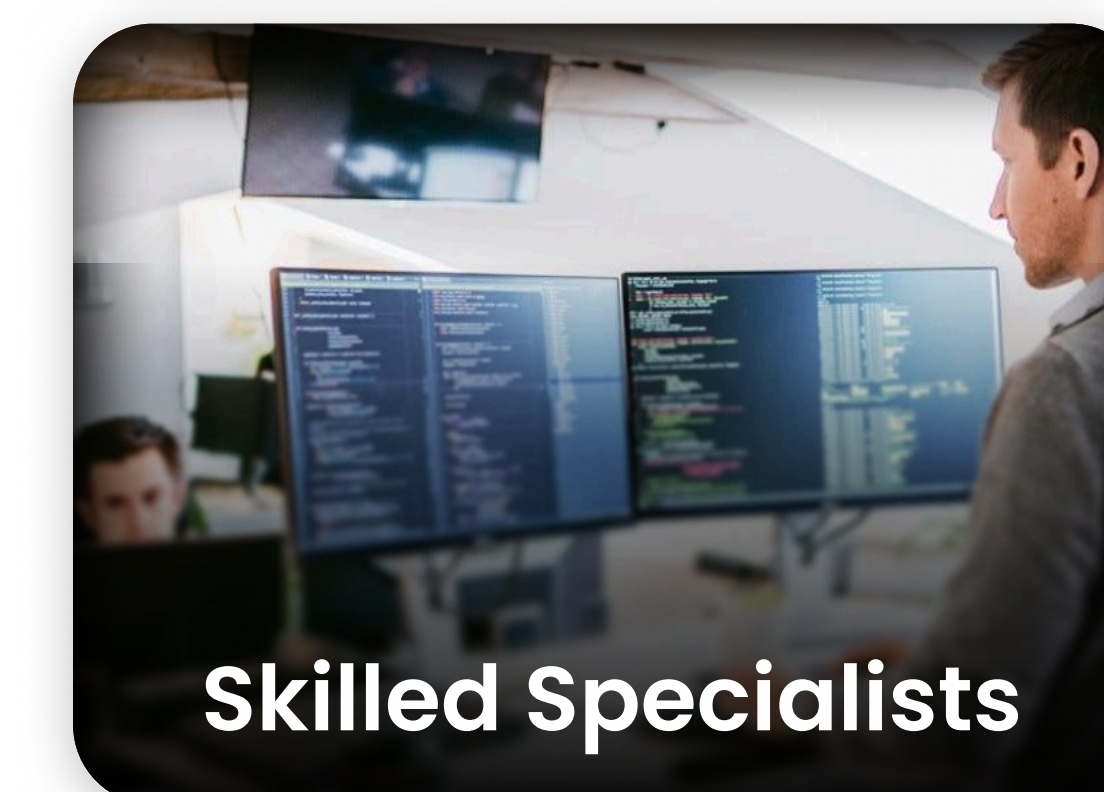

We treat your project like our own.

Always Available

Quality Built In

Skilled Specialists

Honest Advice

Since 2022

We started because too many AI projects never go live.

We kept seeing the same story. A company runs an AI pilot. Leadership gets excited. Then the project stops. Security has questions nobody can answer. The tool does not connect to existing systems. Nobody owns what happens after the demo.

\$10M+

In Growth Enabled
for Our Clients

That is why we built Lenaar Digital. We focus on the hard part: getting AI into production and keeping it there. Our team in the United States works side by side with your people from day one.

When we finish, your team can run the system, update it, and grow it. You should not need us forever. But we are here when you want help scaling further.

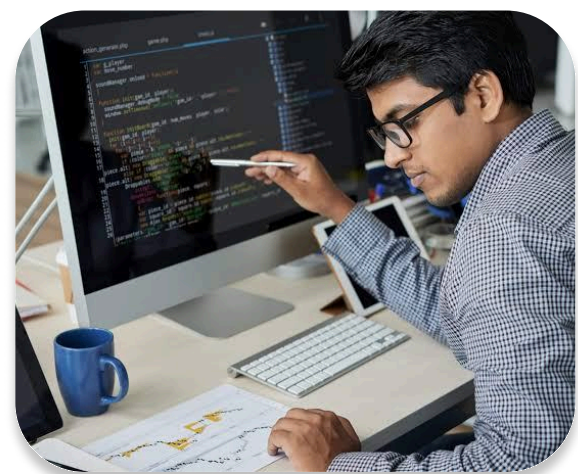

How we work with you?

Pick the model that fits your team.

In-house Project Teams

We assign a full team to your project. They learn your business, build your product, and stay focused until launch.

Staffing & Managed Engineers

Add skilled engineers to your team without the cost and hassle of hiring full time. We handle onboarding, management, and quality checks.

MVP in 30 Days

Got an idea and need to launch fast? Our startup program gets you a working product in 30 days, with market research included.
